

Cybersecurity Tips For Stolen Assets

YOUR AWARENESS IS THE BEST DEFENSE

Cyber attackers know that targeting your laptop or cell phone is low hanging fruit and gains them easy access. However, some simple offensive and defensive measures can keep your data safe and maybe even find your stolen asset.

PRO TIPS

- Change your passwords
- Contact your bank/ keep an eye on your credit
- > Remote wipe
- Laptop GPS service
- Backup/sync data
- Use a VPN
- Use a password vault

Preparation: Backup Your Data

Backup services are lightweight, cheap, and an important tool in protecting your data from being stolen.

Preparation: Remote Services

If your media gets stolen, utilize remote wipe and GPS services to help manage your stolen device.

Containment: Change Your Passwords

Immediately change you passwords to sensitive accounts that you may have logged in to from the stolen media.

Containment: File a Report

Filing a report with law enforcement allows a record with your laptop's serial number for reference if it does turn up.

Containment: Check Your Credit

Contact your bank and let them know your laptop was stolen and you may have had personally identifiable information on there such as credit cards.
